

'Nonsense': Top Scientists Demolish Alarmism Behind UN Climate Summit

Michael Bastasch

November 23, 2015

A panel of prominent scientists debunked one of the most popular global warming arguments ahead of a major United Nations climate summit to take place in Paris later this month.

The scientists slammed policies to reduce carbon dioxide emissions as “nonsense,” and they criticized politicians and activists for claiming the world was on the path for catastrophic global warming.

“The most important thing to keep in mind is — when you ask ‘is it warming, is it cooling’, etc. — is that we are talking about something tiny (temperature changes) and that is the crucial point,” Dr. Richard Lindzen, a veteran climate scientist at the Massachusetts Institute of Technology.

“We are speaking of small changes 0.25 Celcius would be about 51% of the recent warming and that strongly suggests a low and inconsequential climate sensitivity — meaning no problem at all,” said Lindzen, who is also a senior fellow at the libertarian Cato Institute.

President Barack Obama and his activist allies are calling for U.N. delegates to sign onto a global treaty to reduce CO2 emissions. Obama has been heavily pushing for this treaty for the past year or so, even lobbying the Chinese government to sign onto an agreement.
