

## **Irresponsible on 'settled science'**

Wes Tator  
September 21, 2015

Sept. 19 — To the Editor:

I am a bit surprised and dismayed that Fosters would publish the letter entitled "No 'Settled Science' on Climate."

In fact, it is settled science, "97% of scientific literature agrees that Climate Change and Greenhouse gases are dangerous." This statement comes from Jerry Taylor, a fellow of the conservative Cato Institute.

While we all enjoy the freedom to speak as we please, it seems a bit irresponsible for a significant local media outlet to propagate such views as Fosters did just last Thursday.
